**Abstract:** Building Resilience Campuses: A Blueprint in Proposing Safe Spaces to Address Sexual Grooming in Academia is the title of the study. The study delves into the intricate matter of sexual grooming in academic settings and proposes a comprehensive approach to intervention and prevention. Using qualitative approaches, this study assesses the prevalence of grooming incidents, identifies recurrent themes, and investigates the repercussions on victims and educational communities. Along with providing research-based recommendations for curriculum developers, school administrators, and other interested parties, the study also critically evaluates present methods. This study aims to provide useful guidance for establishing a secure and supportive learning environment for all involved. The results of this study indicate that the respondents were not very aware of the risks associated with sexual grooming. This can lead to negative outcomes such as manipulating, exploiting, and abusing children and young people when someone establishes a relationship and gain their trust. Due to the fact that many students especially women prefer older guys, sexual grooming is becoming increasingly common in academic settings. First of all, they consider them to be more relationship-savvy, especially those who are employed or have enough money, they feel as though they are protected and can somehow care for their needs—funds taken from their stipends. Younger partners believe that because the elder partner is more experienced, s/he can mentor and teach them in a variety of areas. From the perspective of the more senior person in the relationship, they prefer dating a younger partner since they perceive themselves as the dominant party. Additionally, they think that making the "right decisions" and knowing them may improve their relationship.

To sum up, sexual grooming is a very dangerous and deceptive practice that can have terrible effects on its victims. It is critical to realize that grooming is a purposeful technique employed by offenders to win over their victims' confidence and control with the frequent goal of engaging in sexual exploitation. But even if the impacts might not always be severe, they are nevertheless alarming, according to the study and poll we've done on the subject of sexual grooming. The process of developing a friendship with someone in order to take advantage of them, especially sexually is known as "sexual grooming". School administrators are recommended to be involved in implementing comprehensive research such as this given to every school campus. School administrators should research the most effective methods for avoiding and handling cases of sexual grooming by examining current procedures, staff and faculty development initiatives, and how well regulations work to create a secure reporting environment and evaluate how well preventive steps are being put in place to keep students safe.
